

# Pablo Perez Garcia

Blue Team Analyst · SOC Level 1 ·  
Defensive Cybersecurity · Digital  
Forensics

Higher Technical Degree in Computer Systems and Network Administration (Spanish EQF Level 5, final grade 8.37/10), actively transitioning into defensive cybersecurity. Solid technical foundation built over 9 years of SLA-based operations in 24/7 continuous service at Movistar Prosegur Alarmas: incident triage, structured escalation via Jira and remote analysis over IP infrastructure. Currently IT Technician at Cartronic Group, responsible for Active Directory, WatchGuard firewall, network segmentation and monitoring with Nagios/Zabbix. Enrolled in a Master's Degree in Cybersecurity & AI (Evolve Academy), with a personal SOC lab based on Wazuh + Zeek + Snort on Proxmox. Certifications in preparation: AZ-900, BTLL (Q3 2026) and SC-200 (Q4 2026).

## TECHNICAL SKILLS

- **SOC and defensive security:** Wazuh (lab with Zeek), Snort IDS, log analysis (auth.log, syslog, event logs), Wireshark, TP/FP triage and classification, MITRE ATT&CK, ISO 27001, CIS Controls and NIST CSF (working knowledge), OT Cybersecurity (IFCT0050).
- **Offensive tools (applied to defense):** Nmap, Metasploit, Burp Suite, OSINT (Shodan, Google Dorks).
- **Infrastructure and perimeter:** WatchGuard firewall, pfSense, network segmentation, VLANs, VPN, Linux and Windows Server hardening, Active Directory, GPOs, Entra ID, Microsoft Intune, M365, Azure (fundamentals).
- **Scripting and ITSM:** Python, Bash, PowerShell, Jira, Helix ITSM (BMC), Salesforce, SLA-based escalation. Continuous practice on TryHackMe and Cyberdefenders.

## LANGUAGES

Spanish (native) English: B2 (MCER)

## EDUCATION

### System Administrator - Higher Level Vocational Training

Ilerna Online - Final grade 8.37/10  
sep 2023 - feb 2026

### Cibersecurity & IA Proprietary Master's

Evolve Academy  
apr 2026 - dec 2026

## PROFESSIONAL EXPERIENCE

### IT Support

Cartronic Group  
dec 2025 - Present

IT infrastructure administration with an active security and monitoring component:

- Perimeter firewall management (**WatchGuard**): rules, VPN, network segmentation; and console-based administration of managed switches (VLANs, port security with MAC sticky, port hardening).
- Administration of **Active Directory** (50+ users), GPOs and access control; administration of Microsoft 365 and Google Workspace.
- Deployment and maintenance of the monitoring stack (**Nagios and Zabbix**) over critical services, with a focus on early anomaly detection.
- Virtualization with Proxmox and VMware; service deployment on Docker containers.
- N1-N2 support to internal users.

## PROJECTS

### Home SOC lab— Wazuh+ Zeek on Proxmox VE

May 2026

Home SOC lab set up entirely on a Proxmox home server using lightweight LXC containers. It covers log collection, threat detection, network traffic analysis, and real-time alerts—all using free and open-source tools

☆ Wazuh · Zeek · Proxmox

### SSH Brute Force Detector

May 2026

- Python tool that analyzes auth.log to detect SSH brute-force attacks without SIEM
- Identifies attacking IP addresses, compromised accounts, and temporal patterns; generates exportable incident reports
- Demonstrated skills: log analysis, attack pattern detection, defensive security scripting

☆ Python · Log Analysis · MITRE ATT&CK T1110

### Secure Network for SMEs — SysAdmin HND thesis

Sep 2025 - Dec 2025

- Complete design and implementation: perimeter firewall (pfSense), IDS with Snort rules, and Nagios monitoring
- Active Directory on Windows Server 2022, network segmentation, and validated intrusion detection testing
- Comprehensive technical documentation: topology, cost analysis, testing procedures, and results

☆ pfSense · Snort IDS · Nagios · Windows Server 2022

## CERTIFICATIONS

### Completed

- *Departmental Network Administration & Design* (600h · IFCT0410 · LideraK)
- *OT Cybersecurity — Advanced* (120h · IFCT0050 · Grupo Hedima)
- *Python and Django* (40h · IFCT095PO · Campo Grande)
- *ISO 27000 — Information Security Standards* — LinkedIn Learning

### In preparation

- *AZ-900* — Microsoft Azure Fundamentals (base for SC-200)
- *BTL1* — Blue Team Level 1 (Q3 2026)
- *SC-200* — Microsoft Security Operations Analyst (Q4 2026)

## PROFESSIONAL EXPERIENCE

### IT Support (internship)

Prosegur

apr 2025 - jul 2025

Vocational degree internship in the endpoint management department, in a Microsoft corporate environment:

- N1-N2 support to a ~250-user corporate environment (alarm monitoring operators, remote technical support operators and administrative staff).
- Identity and device administration through **Active Directory**, **Entra ID** and **Microsoft Intune**.
- On-premise to cloud migration (Windows Server AD → Azure AD).
- Ticket management in **Helix ITSM (BMC)** with formal SLA tracking; full autonomy from the second month of the internship.
- OS imaging and deployment via PXE; GPO and inventory management.

### Security monitoring operator

Movistar Prosegur Alarmas

feb 2017 - dic 2025

SLA-based technical operations in 24/7 continuous service on electronic security systems (alarms, video surveillance, IP infrastructure) for national and international B2B/B2C clients:

- **Incident triage and response** across a distributed fleet of alarm panels, IP cameras, NVRs and DVRs: remote analysis of connectivity, DNS, IP addressing, port and firmware configuration.
- **Structured escalation via Jira** to specialised teams (DTI, Field Engineering) following formal operating procedures.
- End-to-end ticket management in **Salesforce CRM** under SLAs with monthly performance-based incentives.
- Multilingual customer support (Spanish and English) to national and international clients.
- **Additional technical contribution:** informal support to shift colleagues on office productivity, end-user computing, internal applications and Salesforce; internal technical reference before formal escalation to IT.
- Developed a Python-based automated KPI report on Salesforce, shared with the team as a tracking tool.

*This SLA-based, 24/7 experience on critical infrastructure is the foundation on which I am building my transition into defensive cybersecurity.*
